Literal occurrences of multiword expressions: quantitative and qualitative analyses

Agata Savary, Silvio Ricardo Cordeiro, Timm Lichte, Carlos Ramisch, Uxoa Iñurrieta, Voula Giouli

University of Tours, Paris-Diderot & Aix-Marseille (France), Tübingen (Germany), Basque Country (Spain), Athena Research Center (Greece)

IPIPAN, Warsaw, 14 January 2019

| | Quantitative analysis | | |
|------|-----------------------|--|--|
| | | | |

 Word combinations, which exhibit lexical, syntactic, semantic, pragmatic and/or statistical irregularities.

Multiword expressions

- Pervasive feature: **non-compositional semantics** the meaning of an MWE cannot be deduced from the meanings of its components, and from its syntactic structure, in a way deemed regular for the given language.
 - (PL) *mieć muchy w nosie* 'to have flies in one's nose'⇒'to be bad-tempered'

| MWEs | LOs | Corpus | Quantitative analysis | Qualitative analysis | Coda | Bibliography |
|------|--------|--------|-----------------------|----------------------|------|--------------|
| 00 | 000000 | 0000 | 0000 | 0000 | 00 | 00 |
| | | | | | | |

Multiword expressions

Heterogeneous nature of MWEs

- compounds 'złożenia'
 - (PL) na przykład 'for example', panna młoda 'young maid'⇒'bride'
- complex terms 'terminy wielowyrazowe'
 - (PL) układ scalony 'integrated circuit'
- multiword named entities 'wielowyrazowe jednostki nazewnicze'
 - (PL) *Europejski Bank Odbudowy i Rozwoju* 'European Bank for Reconstruction and Development'
- light-verb constructions 'analityzmy werbo-nominalne'
 - (PL) podjąć decyzję 'make a decision'
- phrasal verbs 'czasowniki frazowe'
 - (EN) to make up for sth 'nadrobić coś'
- idioms 'idioms'
 - (PL) mieć muchy w nosie 'have flies in one's nose'⇒'to be bad-tempered'
- proverbs 'przysłowia'
 - (PL) nie wywołuj wilka z lasu 'don't tempt your fate'

Literal occurrences of MWEs

Example

The boss was pulling the strings from prison. (EN)
 'The boss was making use of his influence while in prison.'

(2) You control the marionette by <u>pulling</u> the <u>strings</u>.

SOA

- Using the **interplay between literal and idiomatic readings**, and their distributional and statistical properties, to discover how idioms are stored and processed in human mind [Cacciari and Corradini(2015)]?
- Links between literal and idiomatic readings can inform us which morpho-syntactic variation is allowed or prohibited by some MWEs
 [Sheinfux et al.(2017), Pausé(2017)]
- Distinguisthing literal and idiomatic readings as one of major challenges in MWE-related NLP [Constant *et al.*(2017)]
- Using context to **automatically distinguish literal and idiomatic occurrences** [Peng *et al.*(2014), Peng and Feldman(2016)]

(EN)

| | | | | |

Quiz: What is a literal occurrence?

- (1) The boss was pulling the strings from prison.
- (2) You control the marionette by pulling the strings.
- (3) As an effect of pulling, the strings broke.
- (4) He strings paper lanterns on trees without pulling the table.
- (5) Determine the maximum force you can <u>pull</u> on the <u>string</u> so that the <u>string</u> does not break.
- (6) My husband says no strings were pulled for him.
- (7) She moved Bill by pulling wires and strings.
- (8) The article addresses the political <u>strings</u> which the journalist claimed that the senator pulled.
- (9) The strings pulled the bridge.
- (10) He was there, pulling the strings, literally and metaphorically.

| MWEs | LOs | Corpus | Quantitative analysis | Qualitative analysis | Coda | Bibliography | |

| | | | | | | | |

What is a literal occurrence?

- Idiomatic occurrences (IOs)
- (1) The boss was **pulling** the **strings** from prison.
- (6) My husband says no strings were pulled for him.
- (7) She moved Bill by pulling wires and strings.
- (8) The article addresses the political **strings** which the journalist claimed that the senator **pulled**.
- (10) He was there, pulling the strings, literally and metaphorically.
- Literal occurrences (LOs)
- (2) You control the marionette by pulling the strings.
- Coincidental occurrences (COs)
- (3) As an effect of pulling, the strings broke.
- (5) Determine the maximum force you can pull_{1,2} on the string₁ so that the string₂ does not break.
- (9) The strings pulled the bridge.
- Out of scope (different lexemes)
- (4) He strings paper lanterns on trees without pulling the table.

| | and the second | Quantitative analysis | | 0 |
|--|--|-----------------------|--|---|
| | | | | |

Literal occurrence – a definition

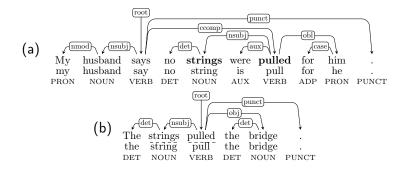

Given a MWE e with components e_1, \ldots, e_n , a *literal occurrence* (LO) of e is a co-occurrence e' of words e'_1, \ldots, e'_n fulfilling the following conditions:

- 1. e'_1, \ldots, e'_n can be attributed the same lemmas and parts of speech as e_1, \ldots, e_n .
- 2. The syntactic **dependencies** between e'_1, \ldots, e'_n are the same or **equivalent** as in the canonical form of e^a
- 3. e' is not a MWE occurrence

^a**Canonical form**: the least marked syntactic form preserving the idiomatic meaning, here: *the boss pulled strings*. A form with a finite verb is less marked than one with an infinitive or a participle, the active voice is less marked than the passive, etc. A CF is expected to capture the semantic roles Dependencies are **equivalent** if the syntactic variation can be neutralized while preserving the overall meaning. For instance, (8) can be reformulated into *The journalist claimed that the senator pulled the strings*, and this article addresses them.

| | 1 State | Quantitative analysis | | 0 |
|--|---|-----------------------|--|---|
| | | | | |

Importance of the canonical form

Same dependency (nsubj) between *strings* and *pulled* but (b) is not a LO of (a).

| MWEs | LOs | Corpus | Quantitative analysis | Qualitative analysis | Coda | Bibliography |
|-------|------------|---------|-----------------------|----------------------|------|---------------------|
| 00 | 00000● | | 0000 | 0000 | 00 | 00 |
| Resea | rch que | estions | | | | |

- Focus on **verbal** MWEs (VMWEs) frequent discontinuity, ambiguity and flexibility
- Quantify the LO phenomenon:
 - relative frequency of LOs with respect to IOs and COs
 - distribution of this distribution across different VMWE types and categories
- Study cross-lingual aspects of LOs:
 - cross-lingually valid reasons for LOs to occur
 - language-specific reasons
 - studied languages: Basque, German, Greek, Polish and Portuguese

Data

PARSEME corpus of verbal MWEs

[Savary et al.(2018), Ramisch et al.(2018)]

- coordinated effort of 20 language teams
- unified terminology, typology and annotation guidelines
- corpus of 20 languages, 6,000,000 words, 80,000 annotated VMWEs

Corpus 1.1

| Language | Sentences | Tokens | VMWE categories | | | | | | Tagset |
|------------|-----------|---------|-----------------|-----|-----|-----|-----|--------|--------|
| Language | | TUKEIIS | All | VID | LVC | IRV | VPC | Others | Tagset |
| Basque | 11,158 | 157,807 | 3,823 | 20% | 80% | 0% | 0% | 0% | UD+BT |
| German | 8,996 | 173,293 | 3,823 | 36% | 8% | 8% | 48% | 0% | UD |

| 00 | 000000 | 0000 | 0000 | 0000 | 00 | 00 |

VMWE typology (v. 1.1)

- Universal categories (valid for all languages):
 - verbal idioms (VIDs)

wyciągnąć nogi 'stretch legs'⇒'die'

- light verb constructions (LVCs)
 - LVC.full: *mieć miejsce* 'have place'⇒'take place'
 - LVC.cause: *dać prawo* 'give right'⇒'grant right'
- Quasi-universal categories (valid for many languages):
 - inherently reflexive verbs (IRVs)

oglądać się (na innych) 'watch oneself (on others)'⇒'count on (the others)'

- verb-particle constructions (VPCs)
 - VPC.full (EN) to do in 'to kill'
 - VPC.semi (EN) to eat up 'to eat completely'
- multi-verb constructions (MVCs) mainly in Asian languages

| MWEs | LOs | Corpus | Quantitative analysis | Qualitative analysis | Coda | Bibliography |

| 00 | 000000 | 0000 | 0000 | 0000 | 00 | 00 |

Automatic extraction of LO candidates

Heuristics

For each annotated VMWE extract all (non-annotated) sequences containing the same lexemes (lemmas+POS), under 4 heuristics:

- WindowGap matched tokens are separated by no more than 2 gaps
- BagOfDeps matched tokens form a weakly connected graph (arc directions and labels are ignored)
- UnlabeledDeps matched tokens form a connected graph (labels are ignored)
- LabeledDeps matched tokens form a connected graph and the dependency labels are identical as in the VMWE

| MWEs | LOs | Corpus | Quantitative analysis | Qualitative analysis | Coda | Bibliography |
|------|--------|--------|-----------------------|----------------------|------|--------------|
| 00 | 000000 | 0000 | 0000 | 0000 | 00 | 00 |

Manual annotation of LO candidates

Annotation categories

- E = annotated VMWE, C = candidate LO of E,
- ERRORS E is not a VMWE, C is in fact a VMWE, C is a non-verbal MWE, C has wrong lexemes
- COINCIDENTAL the dependencies are not preserved
- LITERAL the dependencies are preserved but the idiomatic meaning is lost
 - LITERAL-MORPH LO that could be automatically distinguished from an IO by checking morphological constraints
 - LITERAL-SYNT LO that could be automatically distinguished from an IO by checking syntactic constraints
 - LITERAL-OTHER LO that could be automatically distinguished from an IO only by checking more elaborate constraints (e.g. semantic, contextual)

| EL | 0.11 | 0.86 | 0.10 | 0.15 | 0.88 | 0.13 | 0.15 | 0.80 | 0.13 | 0.16 | 0.51 | 0.12 | 0.11 | 1.00 | 0.10 |
| PL | 0.30 | 0.96 | 0.23 | 0.43 | 0.75 | 0.27 | 0.49 | 0.69 | 0.28 | 0.52 | 0.22 | 0.15 | 0.27 | 1.00 | 0.21 |
| PT | 0.14 | 0.98 | 0.13 | 0.17 | 0.62 | 0.14 | 0.20 | 0.59 | 0.15 | 0.34 | 0.37 | 0.18 | 0.13 | 1.00 | 0.11 |

- The heuristics are skewed towards high recall.
- Automatic identification of LOs, given lemmas and dependencies, is a hard task.
- Sliding window and dependency-based statistics are complementary.

| 00 | 000000 | 0000 | 0000 | 0000 | 00 | 00 |

Conditions under which literal occurrences take place

| VIDs - cross-language condition | VIDs - cross- | language | conditions |
|---------------------------------|---------------|----------|------------|
|---------------------------------|---------------|----------|------------|

• The VID is figurative (the literal meaning is easy to imagine)

Dawno juz powinien był wyciągnąć nogi 'He should have stretched legs long ago.' ⇒ 'He should have died long ago.' *Położyłem się na trawie i wyciągnąłem nogi*. 'I lay down on the grass and stretched my legs.'

Violated morphological or syntactic constraints lead to disambiguation.

Papież wyniósłby na <u>ołtarze</u> Jana Pawła II. 'The pope would bring John Paul the 2nd out on altars.'⇒'The pope would canonize John Paul the 2nd.' Za chwilę kardynałowie wyniosą obraz na <u>ołtarz</u> przed kościołem. 'In a while the cardinals will bring the painting out on the altar in front on the church.' Nie będziemy w stanie nawiązać z nim kontaktu 'We will not be in the state to make contact with him.' ⇒'We will not be able to make contact with him.' Komendant był w stanie <u>nietrzeźwości</u>. 'The commandor was is the state of nietrzeźwość'

• The LO is a frequent collocation

Służenie nam mają we krwi 'They have serving us in blood.'⇒'Serving us is their innate ability.'

Miał we krwi ponad 1,5 promila alkoholu. 'He had over 1.5 promil alcohol in his blood.'

| MWEs | LOs | Corpus | Quantitative analysis | Qualitative analysis | Coda | Bibliography |
|------|--------|--------|-----------------------|----------------------|------|--------------|
| 00 | 000000 | 0000 | 0000 | 0000 | 00 | 00 |

Conditions under which literal occurrences take place

LVCs

- Cross-language conditions
 - A predicative noun has a non-predicative homograph

Rabunki miały miejsce na peryferiach stolicy 'have place'⇒'take place' Łódź miała miała miejsce postoju na przystani. 'The boat had its parking place in the dock.'

Drabina miała 2,5 metra wysokości 'the ladder had 2.5 meters of height' Przecież many Jego Wysokość Króla IV RP 'But we have His Height King of the 4th Polish Republic.'

• Language-specific conditions (PL)

negation of the copula być 'to be' is expressed by the light verb nie ma 'not has' ⇒ 'there is no'

Imigranci mają powody do niepokoju. 'Immigrants have reasons to worry.' *Nie ma powodów do niepokoju.* 'Not has reasons to worry'⇒'.'There are no reasons to worry.

| MWEs | LOs | Corpus | Quantitative analysis | Qualitative analysis | Coda | Bibliography |
|------|--------|--------|-----------------------|----------------------|------|--------------|
| 00 | 000000 | 0000 | 0000 | 0000 | 00 | 00 |
| | | | | | | |

Conditions under which literal occurrences take place

• The verb has a clearly different meaning in the LO

Mieści się tu rektorat universytetu. 'The university rectorate fits ilself here.'⇒'The university rectorate is located here.' *Urządzenie <u>mieści się</u> w dłoni*. 'The device fits itself in a palm.'⇒'the device fit in a palm.'

• True reflexive or reciprocal uses of the reflexive clitic

Dzielili się święconym jajkiem. 'They shared themselves with a święcone egg.'⇒'They shared as święcone egg.' Embrion_dzieli się na cztery części. 'The embrio divides itself into four parts.'

Impersonal or middle passive alternations

Mam się dobrze. 'I have myself well.'⇒'I'm fine.'

To sig ma, co los przyniesie. 'This has oneself what the fate brings.'⇒'One has what the fate brings.'

• Violated morphological or syntactic constraints lead to disambiguation.

Polityk dopuszczał się bezprawia. 'The politician allows oneself.ACC outlaw acts.<u>GEN</u>.' \Rightarrow 'The politician dopuszczać się bezprawia.' Dopuszcza się taką formę sprzedaży. 'Allows oneself.ACC such form.<u>ACC</u> of sale.' \Rightarrow 'Such form of sale is allowed'

| 00 | 000000 | 0000 | 0000 | 0000 | 00 | 00 |

Reasons for literal occurrences to take place

Hypotheses

- Speakers generally tend to **avoid ambiguity** between literal and idiomatic readings (unless this ambiguity is intended, e.g. in word plays).
- Literal occurrences of VMWEs do occur when:
 - The LO is hard to rephrase, e.g. if the VMWE components are functions words (*się* 'oneself', *up*), or the LO is a strong collocation (*mieć 0.2 promila alkoholu we krwi*).
 - The VMWE imposes morpho-syntactic constraints which the LO violates. This leads to disambiguation.
 - Other contextual features are strongly disambiguating (topic).

| | Quantitative analysis | | 0 |
|--|-----------------------|--|---|
| | | | |

Conclusions

- When a VMWE can occur, it does occur (LO is a rare phenomenon)
- LOs have a Zipfian distribution
- Distinguishing LOs from IOs is not a major challenge, most of it can be handled by methods focused on a few frequent cases.
- The knowledge of morphosyntactic constraints imposed by a VMWE help solve many ambiguities.
- The rate of COs is varies greatly from language to language and is high in Basque (20%) and Portuguese (10%)
- Distinguishing COs from IOs is a major challenge in these languages, even if syntactic dependencies in a VMWE are known.
- The heuristics are efficient in checking corpus annotation consistency.

| MWEs 00 | LOs 000000 | Corpus | Quantitative analysis | Qualitative analysis 0000 | Coda ○● | Bibliography 00 |
|------------|----------------------|--------|-----------------------|------------------------------|------------|---------------------------|
| Futur | e work | | | | | |

- Merging aspectual variants for better identification and more accurate LO definition: *da się* vs. *daje się*.
- Defining a minimal format of a MWE lexicon for efficient MWE identification.
